

ABSTRACT OF DISCLOSURE

A wrist type portable image capturing device 1 comprising a device body 2 and wrist bands 3, 4 attached to the device body 2, wherein a camera portion (image capturing portion) 6 and an optical communication portion 7 are provided on the device body 2. Concretely, the camera portion 6 and the optical communication portion 7 are provided near to each other in parallel, and a transparent covering member 21 which covers the camera portion 6 and the optical communication portion 7 in common is provided. A shutter operational member 23 is arranged at a position apart from the camera portion 6 and the optical communication portion 7. Between the shutter operational member 23, and the camera portion 6 and the optical communication portion 7, a data display portion 22 is arranged. The wrist band 3 can be rotated to be overlapped on the rear surface of the device body 2.
